

Structure

The system workstation can be supplemented with an add-on unit. This allows for optimal positioning of tools and consumables as well as the attachment of a light.

The standard version consists of colourless anodised extrusions with open slots. Coloured anodising, painting or powder coating is also possible. For applications in clean rooms and laboratories, we recommend the use of Softline extrusions, in which all slots are closed.

Technical data

	Order details	Load
1	Without superstructure	- *
2	With superstructure (for perforated sheet, KLINK®)	- *
3	Single superstructure (light load)	1500 N (150 kg) **
4	Double superstructure (heavy load)	1500 N (150 kg) **

* Depending on material and dimension
 ** For standard size 1500 mm x 680 mm

Please use the checklist for the ordering process (see page 56/57).
